

Step-1 : Assume role from CMB-NP AWS 729642621935

```
aws sts assume-role --role-arn arn:aws:iam::7292621935:role/SomeRole --role-session-name test-cert
```

Step-2 : export keys generated out of step-1. (FYI — don't try this I have obfuscated keys in this email )

```
export AWS_ACCESS_KEY_ID="ASIAJLXKRMQ33CLDIYQ"
export AWS_SECRET_ACCESS_KEY="GU/oH31CP7T8zM+8Lei+DtO6hEbxAOS3bFN8NW"
export
AWS_SESSION_TOKEN="FQoDYXdzEJD////////wEaDNnYFihR4cpjjMUEqSLMAQInpgMPuGj8ncsDFRwIXhPTscU1
sw94/yz5htXxFGVFFrCy/33YXgQGapzS1kUbonr1EeG3IVyXgYDa8atd/3UzPNdayY8Hsq3gh5CCMbpldEM/aQcaoIM
rH5Rj7Gow6NV5BMuBN8RKTVszy+tcCW/hZP+Zz0gd23NhZIn/IMCeF4ziR34YLSeBFNRYn28YomfbL4Ukv3r/P3em
8thuikpgNTA086A/FRKIqrdvgcs32h4yBzJGg4cuppv1HuhI7/rNUDZrSiporTOBQ=="
```

Step-3 : import certificate in CMB-NP. Successful import should give ARN.

```
aws acm import-certificate --certificate file:///roletest\_some\_com.pem --certificate-chain file:///DigiCertCA2.pem --
private-key file:///roletest.some.com.key.pem
{
  "CertificateArn": "arn:aws:acm:us-east-1:7242621935:certificate/2693af-1113-4336-b9dd-c0bcec7e21c3"
}
```
